Re: Infratech's New "*SWEET SPOT*" Heater!

Infratech is excited to introduce the "*SWEET SPOT*" Heater. Building upon over fifty years of experience, we have found that the combination of a new 48" Heater Body & 5200-Watts (dual elements) are the perfect balance of warmth and style for the most common mounting height of 10'.

The New *SWEET SPOT* heaters will replace the existing CD-5000 and the WD-5000 heaters. The New CD-5224 (240V) and our Flush Mount Combination of WD-5224 (240V) and 48" Flush Mount Frame are available immediately in 304 Stainless Steel in all eight standard colors. All New 48" Heaters also available for Motifs, as well as 316SS Marine Upgrades.

In addition, we are replacing the existing W&C-2500 39" heaters with 2600-Watt, 48" C&W Single Element 48" heaters.

Why are we introducing the new optimal size?

- The most common mounting height is 10'. The New 48", 5200-Watt heater covers a larger area (10' X 10') with even more infrared heat.
- In some installations, the 61" is too long, and 39" is too short.
- A 48" heater can solve certain clearance constraints.
- This heater optimizes the watt/density formula for maximum comfort.

If a customer needs to replace an existing CD-5000 or WD-5000, no problem; heaters and replacement elements will still be made available on special order.

**The "*SWEET SPOT*" Heater delivers a perfect 10! (10' X 10' X 10' Coverage Area)**
